　　　　1 Light Truck
　　　　1 81mm Mortar Stand (bg*) – company cmd call 1-7*
　　　　2 Light Trucks
1 Engineer Battalion
　　????
1 Helicopter Section
　　1 Recce Alouette II

Notes

1) There was only a single such division in the French Army

2) The AMX-VTT & AMX-PC entered service in 1957 replacing the M3 Semi-chenille (halftrack)

3) The M16 is an amalgamation of the tracks allocated to companies

1.2 Operational Groups

French armoured and mechanised regiments may swap or attach one or more companies or squadrons to make operational groups

1.3 Armoured Division (Division Blindée - DB) 59 1962-1968

      1 Jeep + 106mm RCL (bg)

2 Tactical Groups
GHQ
1 Command Stand
1 Jeep
3 Infantry Companies
1 Command Infantry Stand (Bazooka)
3 Infantry Stands
1 Weapons Stand
2 GMC or Simca Trucks
3 GMC or Simca Trucks with MG
1 AT Group
1 Jeep + 106mm RCL
1 Jeep + SS-10 or Entac
1 AT Company
(attached to Tactical groups)
1 Heavy Mortar Company
1 Command Infantry Stand
1 Jeep
1 120mm Mortar Stand – *any cmd in regiment call 1-5*
1 Truck
1 Mechanised Regiment
(as Armoured Brigade)
1 Tank Regiment
(as Armoured Brigade)
1 Artillery Regiment
(as Armoured Brigade)
1 Engineer Company
As Armoured Brigade but in truck rather than AMX-VTT

Notes

1) The Divisions were allocated brigades as follows:

Division	Armoured	Infantry
1ère	2	1
3^{e}	1	2
7^{e}	1	2
8^{e}	0	3

2) The organisation was flexible enough to allow the French to make battlegroups by swapping companies between regiments

3) The Light Aviation group received a single Alouette III with SS.11 in 1963 and a Westland S55. The Djinn were retired. In 1965 the Sikorsky H19 replaces the Westland. In 1966 the Nord 3400 are retetired. This organisation is based on the 1er DB, though the others were similar

4) Some divisions in the early 60's may have had Lacrosse SSM's instead of Honest John

5) Jeeps (MG) loose their MG when the infantry dismount. Jeeps can be WW2 era Willys or Hotchkiss

6) The 81mm Mortars with the Mechanised Regiment are an amalgamation of mortars issued to companies.

7) The organisation of the engineer company is a "best guess" based on limited information

8) The organisation of the "tactical groups" in the infantry is flexible. The list above shows companies and AT evenly split between the two. The SS-10 was not available on jeeps until 1963/4 and were replaced by Entac starting in 1966.

1.4 Mechanised Division (Division Mécanisée) 67 1968 to 1979

DHQ
   1 Command Stand

OR (1974)
    1 AMX-13VTT
    1 Command Infantry Stand
    1 Pluton Launcher
1 Divisional Security Battalion (war time only)
    ????
Engineer Regiment
    Unknown organisation but
  5 Engineer Companies
  1 Bridging Company
    Gillois Bridge

Notes

1) The division was supposed to have three mechanised brigades but actually had two mechanised and a motorised brigade

2) In 1972 the AMX-30's were upgraded replacing the coax 12.7mm with a 20mm

3) In 1974 the AMX-10P strated to replace the AMX-VTT

4) Milan started to replace the 106mm and the Entac from 1974. The Entac went fairly quickly but the 106mm survived in to the 80's

5) The LRAC was introduced in 1968, so at the start of the period covered by the list many stands would have Bazooka instead.

6) The organisation of the Motorised Infantry Regiments is an educated guess

7) The AMX F3 started to replace the M41 in 1970

8) The Ratac and MPQ-4 can be attached to a line regiment or operate independently. If attached to a regiment they call guns in the same way as a command stand in the supported regiment. If they are independent they may call any or all of the guns in the regiment on a 1-5. All regimental guns and the divisional 155mm can be called on a 1-3

9) The Pluton started to replace Honest John in 1974

1.5 Armoured Division (Division Blindée) 77 1977 to 1984

    1 Command Stand
    1 Jeep
    3 VCAC
OR
    1 Command AMX-13/SS
    2 AMX-13/SS

Notes

1) In 1982 the AMX-30B2 started to replace the AMX-30B

2) The M16 DCA was officially still on the strength of the artillery regiments at this time, though it was starting to be replaced by a truck towed Tarasque 20mm

3) The RATAC can be attached to a line regiment or operate independently. If attached to a regiment it calls guns in the same way as a command stand in the supported regiment. If it is independent it may call any or all of the guns in the regiment on a 1-5.

4) The first experimental battery of AMX Au F1 entered service in 1979

5) The first AT companies were not formed until the early 80's. Some of the companies were formed temporarily with AMX-13/SS before being re-equipped. The 7e DB had AMX-13/SS and was only re-equipped with VCAC inn 1986

6) The RAC112 (APILAS) starts to supplement the LRAC in 1983

1.6 Armoured Division (Division Blindée) 84 1985 to 2001

DHQ
   1 Command Stand

    1 Rasura GSR Stand
    1 P4 VLTT
3 Recce Sections
    1 Recce GSR Infantry Stand (Milan)
    1 P4 VLTT (MG)

1 AT Company
    1 Command Stand
    1 P4 VLTT
    3 VCAC

Notes

1) The VBL starts to replace the P4 VLTT in 1990, though a few vehicles were on field trails as early as 1986

2) The 20mm and VPM in the Infantry Regiment are amalgamations of weapons issued to the companies

3) The Divisional AT company is often attached to the Infantry Regiment

4) Eryx entered service in 1994 where it started to supplement the RAC112. In no case were any older systems replaced so a French infantry strand could have any combination of Eryx, RAC112 or LRAC, though its unlikely to have all three

      1 Command Stand
      1 VAB-PC
  HQ Company
      1 VAB-VTT (MG)
      1 Recce Infantry Stand (E)
  2 Armoured Engineer Companies
      1 Command Engineer Stand
      1 VAB Genie
      2 AMX30EGB
  1 Mechanised Engineer Companies
      1 Command Engineer Stand
      1 Engineer Stands
      2 VAB Genie
      2 MPG Excavator
  1 Park Company
      1 P4 VLTT
      1 Command Engineer Stand
      1 PAA Bridge
      1 EFA Ferry
      1 MFRD Charge Layer
      1 ENP Mine Layer
      1 EMATS Excavator
      1 MPG Excavator

Notes

1) Type 80 regiments slowly replaced Type 53 regiments

2) The AMX-10P Revalorisé (i.e. up armoured) started to enter service by 2007

3) All VAB are VAB surblindé

4) Excepting the stands in the tank companies a French infantry stand could have any combination of Eryx, RAC112 or LRAC, though its unlikely to have all three

1.8 Armoured Brigade (Brigade Blindée) 2009+

BrigHQ
    1 Command Stand
    1 VAB-PC
HQ Company
    1 VUTC Staff Radio Truck
    1 Infantry Stand (RAC)
    1 VAB-VTT
2 Armoured Regiments
   RHQ
      1 Command Stand
      1 VAB-PC
   Recce Section
      1 Command Recce VBL Reco
      1 VBL
      1 RC112 Stand
   4 Squadrons
      1 Command Leclerc
      2 Leclerc
      1 VAB T20-13
      1 Infantry Stand (T20)
2 Mechanised Regiments
   RHQ
      1 Command Stand
      1 AMX-10PC
   1 Weapons Company
      1 VAB-VTM towing 120 F1 Mortar – *any cmd in regt call 1-7*
      2 Milan 2 Stands
      1 AMX-10P
   1 Recce Section
      1 Command Recce VBL Reco
      1 VBL
      1 Eryx Stand

      2 AMX30EGB
   1 Mechanised Engineer Companies
      1 Command Engineer Stand
      1 Engineer Stands
      2 VAB Genie
      2 MPG Excavator

1 Park Company
    1 P4 VLTT
    1 Command Engineer Stand
    1 PAA Bridge
    1 EFA Ferry
    1 MFRD Charge Layer
    1 ENP Mine Layer
    1 EMATS Excavator
    1 MPG Excavator

Notes

1)   In peace time only two companies in each tank regiment are manned. The others are wartime only

2)   The artillery and SAM groups are attached from administrative regiments. One of the mortar batteries is actually part of the artillery regiment and only manned in wartime.

3)   There is only one rocket regiment to support two armoured brigades.

4)   Each LRM stand includes a COBRA CAR. The battery can fire on any enemy battery called on a 1-8
